REST API Test Suite & Execution Report

Postman Collection Test Artifact • Nikita Polozkov Portfolio

POSTMAN / API

TARGET HOST	ENVIRONMENT	TOTAL REQUESTS	AUTHOR
JSONPlaceholder	`{{base_url}}`	4 Endpoints	Nikita Polozkov

Project Overview: This report presents the automated test execution suite developed inside Postman for validating RESTful API endpoints. The suite covers core HTTP methods (GET, POST, PUT, PATCH), validating status code responses, JSON schema properties, and response latency constraints.

EXECUTION SUMMARY & PERFORMANCE METRICS

100%	7	< 200ms
TEST PASS RATE	TOTAL ASSERTIONS	LATENCY SLA THRESHOLD

EXECUTED ENDPOINTS OVERVIEW

METHOD	ENDPOINT	TEST SCOPE	ASSERTIONS	STATUS
GET	/posts/1	Get Post Details	Status 200, Title data type, ID property	PASSED
POST	/posts	Create New Record	Status 201 Created, Title validation	PASSED
PATCH	/posts/1	Partial Resource Update	Response time < 200ms SLA	PASSED
PUT	/posts/1	Full Record Replacement	Status 200, Property string type check	PASSED

DETAILED ASSERTION SCRIPTS & PAYLOAD VALIDATIONS

GET GET /posts/1 — Structure & Header Assertions

3 Assertions

```
pm.test("Status code is 200", function () { pm.response.to.have.status(200); }); pm.test("Check title property type", function () { var jsonData = pm.response.json(); pm.expect(jsonData.title).to.be.a('string'); }); pm.test("Response has id", function () { var jsonData = pm.response.json(); pm.expect(jsonData).to.have.property('id'); });
```

POST POST /posts — Data Creation & Contract Check

2 Assertions

```
pm.test("Status code is 201 Created", function () { pm.response.to.have.status(201); }); pm.test("Response contains created title", function () { var jsonData = pm.response.json(); pm.expect(jsonData).to.have.property('title'); });
```

PATCH PATCH /posts/1 — Latency & Response SLA Verification

1 Assertion

```
pm.test("Response time is less than 200ms", function () { pm.expect(pm.response.responseTime).to.be.below(200); });
```

Test Design Notes:

- Variables scoped at the collection level allow seamless execution across environments.
- Assertions utilize Chai.js assertion library inside Postman's JavaScript runtime environment.
- Integration ready for Newman CLI execution in automated CI/CD pipelines.
